The Energy Informatics.Academy Conference 2022 (EI.A 2022) (EnergyInformatics.Academy 2022) has collected great contributions from researchers and practitioners in various scientific, technological, engineering and social fields to disseminate original research on the application of digital technology and information management theory and practice to facilitate the global transition towards sustainable and resilient energy systems.

With the whole technical program committee's effort, in total thirty-two (32) high-quality papers (including full papers and short papers) are accepted and presented at the conference. The thirty-two papers cover 4 important aspects of the energy informatics domain (shown in Table 1):

- Simulation and modeling in energy
- Software and applications in energy
- Big data and AI in energy
- Energy informatics projects and analysis

The paper presentations are recorded and available via EnergyInformatics.Academy YouTube channel (EnergyInformatics.Academy 2022; EnergyInformatics.Academy 2022).

Six keynote speakers shared their great experience and knowledge with six speeches and a panel discussion (shown in Table 2). The presentation slides are available via EnergyInformatics.Academy webpage (EnergyInformatics.Academy 2022).

The EI.A 2022 were co-hosted with the Innovation Festival at Dandy Business Park and the industrial and PhD summer school in Energy Informatics. The EI.A 2022 could not success without the following organizations' support:

Table 1 Themes of the accepted and presented papers from Energy Informatics.Academy Conference 2022 (EI.A 2022)

Theme	Paper title	
Simulation and modeling in energy	A Comparison Study of Co-simulation Frameworks for Multi-Energy Systems: The Scalability Problem	
	Agent-based modeling (ABM) for urban neighborhood energy systems: Literature review and proposal for an all integrative ABM approach	
	An agent-based modelling framework for the simulation of large-scale consumer participation in electricity market ecosystems	
	Framework for Dimensioning Battery Energy Storage Systems with Applied Multi-tasking Strategies in Microgrids	
	Simulation of a Cellular Energy System including Hierarchies and Neighborhoods	
	A Hierarchical and Modular Agent-Oriented Framework for Power Systems Co-Simulations	
	An Adapter-Based Architecture for Evaluating Candidate Solutions in Energy System Scheduling	
	Automatic Process Monitoring in a District Heating Substation Utilizing a Contextual Shewhart Chart	
	Software and applications in energy	SGLSim: Tool for Smart Glazing Energy Performance Analysis
		Open-access Tools for the Modelling and Simulation of Electricity Markets
Non-Intrusive Load Monitoring techniques for the disaggregation of ON/OFF appliances		
Design of Data Management Service Platform for Intelligent Electric Vehicle Charging Controller—Multi-charger Model		
Design of an intelligent trading platform for flexibility potentials of private households in the low-voltage grid		
Can we benefit from game engines to develop digital twins for planning the deployment of photovoltaics?		
Probabilistic FlexOffers in Residential Heat Pumps Considering Uncertain Weather Forecast		
Big data and AI in energy	Potentials of game engines for wind power digital twin development: an investigation of the Unreal engine	
	Peer-to-Peer Energy Trading Optimization in Energy Communities using Multi-Agent Deep Reinforcement Learning	
	Investigation on Air Conditioning Load Patterns and Electricity Consumption of Typical Residential Buildings in Tropical Wet and Dry Climate in India	
	Residential Electricity current and appliance dataset for AC-event detection from Indian Dwellings	
	An Implementation of Long Short-Term Memory on Electricity Load Forecasting: Comparison of Multiple Scalers	
	Anomaly detection in quasi-periodic energy consumption data series: a comparison of algorithms	
	Revealing interactions between HVDC cross-area flows and frequency stability with explainable AI	
	Recursive training based Physics Inspired Neural Network for Electric Water Heater modeling	
	Evaluation of Neural Networks for Residential Load Forecasting and the Impact of Systematic Feature Identification	
	Identification of natural disaster impacted electricity load profiles with k means clustering algorithm	

Table 1 (continued)

Theme	Paper title
Energy informatics projects and analysis	Can electric vehicles be an alternative for traditional fossil-fuel cars with the help of renewable energy sources towards energy sustainability achievement?
	Impact of the COVID-19 on residential energy consumption of Hyderabad, India
	A probabilistic approach to reliability analysis of district heating networks incorporation censoring: A report of implementation experiences
	Application of Energy Informatics in Danish Research Projects
	CSTEP-driven business opportunity identification method with a case study of energy use in industrial processes
	Survey data on university students' experience of energy control, indoor comfort, and energy flexibility in campus buildings
	CELSIUS: an international project providing integrated, systematic, Cost-effective large-scale IoT solutions for improving energy efficiency of medium- and large-sized buildings

Table 2 Six keynote speeches at the Energy Informatics.Academy(EI.A) Asia 2021 conference

Keynote speech title	Speakers	Affiliation
Digital Twin modelling of Energy Systems	Bo Nørregaard Jørgensen	University of Southern Denmark
The importance of digitization and architectural thinking to drive long term sustainability	Brian Skov Lykke Rasmussen	IBM
FlexOffers: Towards an Open Standard for Energy Flexibility	Torben Bach Pedersen	Aalborg University
Data-driven methods for Smart Energy Systems	Henrik Madsen	Technical University of Denmark
Data-driven innovation for the green transition	Søren Skov Bording	Center Denmark
Panel session-Accelerating the digital transformation in energy systems

About this supplement

This article has been published as part of *Energy Informatics Volume 5 Supplement 4, 2022: Proceedings of the Energy Informatics.Academy Conference 2022 (EI.A 2022)*. The full contents of the supplement are available online at <https://energyinformatics.springeropen.com/articles/supplements/volume-5-supplement-4>.

Author contributions

All authors read, commented, and approved the final manuscript. All authors read and approved the final manuscript.

Funding

Publication costs were covered by the Energy Informatics.Academy Conference Organizers.

Availability of data and materials

Not applicable.

Declarations**Ethics approval and consent to participate**

Not applicable to this paper.

Consent for publication

Not applicable to this paper.

Competing interests

The authors declare that they have no competing interests.
